Animal Physiology, Fourth Edition
Errata

Chapter 16

The authors of Animal Physiology have become aware that, after publication of our book, a paper used as a key reference for Chapter 16 was retracted. The retracted paper was a source of information for the chapter opener on insulin effects in bears. The authors of Animal Physiology have been in contact with the authors of the retracted paper, and we are assured that the information used in our book is dependable. As soon as a new paper—reporting updated evidence on insulin in bears—is published, we will post the new citation here.
