Prospection, Well-Being, and Mental Health
Andrew Macleod

- Unique in considering how our expectations about the future (as opposed to our past experiences) can influence our health and mental wellbeing in the here and now
- Considers how our expectations about the future can be inaccurate or biased, and the implications this can have for our wellbeing
- Written in an accessible style, exploring the growing body of evidence for the link between prospection and mental health

This book reviews the growing evidence for the link between prospection and well-being. A variety of aspects of prospection are discussed, including prediction and anticipation for future events, judging how we will feel when events do happen to us, and how we feel in the here-and-now when contemplating what will happen in the future.

The Collected Works of D. W. Winnicott
Edited by Lesley Caldwell and Helen Taylor Robinson

Delve into one of the most innovative and humane thinkers in psychoanalysis and child development fresh for the 21st century.

- Brings together for the first time a chronological collection of Winnicott's work
- Explore newly-discovered archival material: letters, reviews, obituaries, drawings, comments, and political discussions
- Includes online access to select audio recordings of Winnicott's radio broadcasts
- Provides a specialist resource in print and online for global access to Winnicott studies

Donald Woods Winnicott (1896-1971) was one of Britain's leading psychoanalysts and pediatricians. The author of some of the most enduring theories of the child and of child analysis, he coined terms such as the 'good-enough mother' and the 'transitional object' (known to most today as the 'security blanket').

Now for the first time, virtually all of Winnicott's writing are presented chronologically in 12 volumes, edited and annotated by leading Winnicott scholars. The Collected Works brings together letters, clinical case reports, child consultations, psychoanalytic articles and papers, including previously unpublished works. The collection begins with an authoritative General Introduction, while every volume features an original introduction examining that volume's major themes, written by an international scholar and psychoanalyst. Editorial annotations provide historical context and background information of scholarly and clinical value. The final volume contains new and illuminating appendices, comprehensive bibliographies, documentation of his lectures and broadcasts, and a selection of Winnicott's drawings.

This extraordinary publication is an essential resource for Winnicott admirers worldwide and those interested in the history and origins of the fields of child development and psychoanalysis.

Perceptual organization comprises a wide range of processes such as perceptual grouping, figure-ground organization, filling-in, completion, and perceptual switching. The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature, written in an accessible form for scholars and students.

The Oxford Handbook of Cultural Neuroscience
Edited by Joan Chiao, Shu-Chen Li, Rebecca Seligman, and Robert Turner
This Handbook examines disparities in public health by highlighting recent theoretical and methodological advances in cultural neuroscience.

How the Mind Comes into Being
INTRODUCING COGNITIVE SCIENCE FROM A FUNCTIONAL AND COMPUTATIONAL PERSPECTIVE
Martin V. Butz and Esther F. Kutter
- Provides an interdisciplinary perspective, helping the reader to develop an understanding of how the mind works that goes beyond disciplinary boundaries
- Adopts a computational approach, helping the reader to understand the mind on a functional level, in contrast to purely conceptual, verbalized levels
- Includes exercises and examples, helping the reader to consolidate the covered material and encouraging them to think ‘outside of the box’

How is it that we can think highly abstract thoughts, seemingly fully detached from the actual, physical reality? This book offers an interdisciplinary introduction to embodied cognitive science, addressing the question of how the mind comes into being while actively interacting with and learning from the environment by means of the body.

Homo Prospectus
Martin E. P. Seligman, Peter Ralston, Roy F. Baumeister, and Chandra Sripada
- Introduces a new field of scholarly inquiry
- Proposes that humans are more appropriately named Homo prospectus
- Changes the focus in psychology on how projecting and evaluating future possibilities drives thought and action, rather than thinking about the past

In this remarkable convergence of research in philosophy, statistics, decision theory, psychology, and neuroscience, Homo Prospectus shows how human prospection fundamentally reshapes our understanding of key cognitive processes, thereby improving individual and social function. It aims to galvanize interest in this new science from scholars in psychology, neuroscience, and philosophy, as well as an educated public curious about what makes humanity what it is.

Gay, Straight, and the Reason Why
THE SCIENCE OF SEXUAL ORIENTATION
Revised Edition
Simon LeVay

- Neuroscientist Simon LeVay presents the best current summary of the science of sexual orientation
- Marshalls a wealth of evidence that points toward the radical new explanation that sexual orientation results primarily from an interaction between genes, sex hormones, and the developing brain.
- Illustrates how the same biological processes that influence a broad array of gendered traits are also the guiding factors behind a person's emerging sexuality.

What causes a child to grow up gay, straight, or bisexual? In this book, neuroscientist Simon LeVay summarizes a wealth of scientific evidence that points to one inescapable conclusion: Sexual orientation results primarily from an interaction between genes, sex hormones, and the cells of the developing body and brain.

The Evolution of Memory Systems
Elisabeth A. Murray, Steven P. Wise and Kim S. Graham

- Clear, jargon-free review of brain evolution - requiring no background in evolutionary biology
- Glossary - Quick and easy access to the meaning of technical terms
- Includes overviews so that readers can understand the main points of each chapter in less than 200 words

The Evolution of Memory Systems sets out a bold and exciting new theory about memory. It proposes that several memory systems arose during evolution and that they did so for the same general reason: to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past.

Toxic Cocktail
HOW CHEMICAL POLLUTION IS POISONING OUR BRAINS
Barbara Demeneix

- Presents evidence, derived from a wide spectrum of scientific and epidemiological studies, that many of these chemicals are interfering with one of our bodies' most essential regulators of brain development: thyroid hormone
- Offers number of recommendations for individuals to apply in their day-to-day life and suggest actions that should be taken at the regulatory level
- Goes through the main catalogue of chemicals that can interfere with thyroid hormone production and action

Children born to women exposed to thyroid-disrupting chemicals have lower IQs and more neurodevelopmental disorders in autism and ADHD, among others. Chemicals that contaminate our bodies and interfere with our thyroids are in fact lowering our IQ and increasing disorders for future generations. A "self-help" guide to reducing exposure to chemicals is included.

The Oxford Compendium of Visual Illusions
Edited by Arthur G. Shapiro and Dejan Todorovic

- The book includes state-of-the-art full-color visual illusions, presented with historic and introductory context, scientific explanation, and future applications
- Many of the illusions in the Compendium have never been anthologized and are likely to be new to readers
- Contributors are leaders in visual perception and in many cases have created the illusions appearing in the volume

Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world. The Oxford Compendium of Visual Illusions is a collection of over one hundred chapters on visual illusions, written by the illusions' creators and vision scientists who have investigated mechanisms underlying their peculiarities.

The Psychology of Good and Evil
Laurent Bègue and Jodie Andri
• Features recent scientific studies to illuminate issues of morality in everyday life
• Thoroughly explores the workings of the moral self
• Analyses how morality affects our lives and relationships with others

In the 21st century, the concept of ethics may seem outdated or obsolete. But in reality, ethics is the omnipresent, ongoing discussion going on in our global communities today. Systematically, people condemn, sanction, demonize, and freely judge one another. As a result, by addressing the simplest of questions ("Is it good or evil?"), laws are legislated and the moral code is created. But what is morality, exactly? And how does the moral code shape the story of our lives?

Written from the perspective of a social psychologist, The Psychology of Good and Evil explores the answers to these big questions in fascinating detail, all while illuminating the inner workings of the human mind, human nature, and the foundations of our beliefs.
