Super Challenge 4: Measures and Time

IMPERIAL UNITS

1. **Imperial units** are measurements such as feet and inches, pints and gallons, pounds and ounces. As well as metric units, some countries, such as the UK and US also use imperial units to measure things. Look at the imperial units listed below and draw lines to match them to the situations they might be used in.

   - **stone**
   - **pint**
   - **foot**
   - **mile**
   - **height (length)**
   - **weight (mass)**
   - **speed**
   - **capacity**

TIME

2. Time can be measured using either a 12-hour or a 24-hour clock. Read the times on the **analogue** and **digital clocks** below and record the times using a 12-hour clock. The first one has been done for you.

   - a. 14.30
   - b. 2.30pm
   - c. 9:00
   - d. 23.15
