The most popular approach to Edexcel B, with real student appeal
This brand new course, from a team led by Bob Digby, will support teachers and students following the 2016 Edexcel GCSE Geography B specification. As well as providing thorough and rigorous coverage of the new specification, the resources are designed to engage students in their learning and to motivate them to progress throughout the course.

- Brand new resources tailored to the new specification, including support for skills and fieldwork
- Clear page design and accessible language which will appeal to all your students
- A complete package of support, with assessment materials, schemes of work, homework resources, a digital Student Book, and a digital Teacher Handbook all on Kerboodle

How the course is structured?

Student Book
978 019 836657 7
£25.00
The Student Book for this course has been endorsed for Edexcel.

Meet the team

The writing team for this new course all contributed to the 2012 edition of GCSE Geography Edexcel B. Series editor Bob Digby has taught geography in schools, been a PGCE tutor, and was GA President for 2012-13.

Dan Cowling is a Chartered Geographer. He’s Head of Sixth Form and teaches geography at Orleans Park School in Twickenham.

Cameron Dunn and David Holmes are both experienced authors, who have each published several geography textbooks.

Evaluation

The Evaluation Pack for this course is free for 30 days and contains a copy of the Student Book and information about the supporting Kerboodle resources, including sample teacher material. To order yours, please return the tear-off form at the back of this brochure.

Coastal deposition

Longshore drift transports sediment along coastlines. When waves break at an angle to the coast, rather than down along the coast, longshore drift is usually in one direction too. The amount of sediment transported is very dependent on the direction. If waves are from the north-east, the longshore drift will be to the north-west, and vice versa. Sand transported by longshore drift creates new landforms where it is very close to where it eroded. In a sheltered area depositional landforms are formed, such as sandbars and spits. This happens when waves break at an angle to the coast, rather than down along the coast. If waves are from the north-east, the longshore drift will be to the north-west, and vice versa. Sand transported by longshore drift creates new landforms where it is very close to where it eroded. In a sheltered area depositional landforms are formed, such as sandbars and spits. This happens when waves break at an angle to the coast, rather than down along the coast.

Depositional landforms

- Beaches: Sandbars and spits grow on beach sand need to be tough:
  - Most of this sand is transported by longshore drift.
  - The river moves out to sea at low tide, sediment is trapped inland. Each tide erodes the spit and fills the channel. The river flow halts the drift, creating a lagoon.
  - Salt marshes build up, and waves erode the spit. The sand is then transported to the beach by backwash.
- Bars: Spits in New Zealand are recurved. The river moves out to sea at low tide, sediment is trapped inland. Each tide erodes the spit and fills the channel. The river flow halts the drift, creating a lagoon. Salt marshes build up, and waves erode the spit. The sand is then transported to the beach by backwash.
- Sand dunes: In the UK, the lagoon of a spit may become the location of a small sand dune. The wind can move sand against the dune, but sand is blown on top of it. Longshore drift is very effective at moving sand against the dune. The sand builds up on the top of the dune, but the wind cannot blow it away. Waves erode the beach, and sand is transported to the beach by backwash.

Transported by longshore drift.

- Sand dunes: In the UK, the lagoon of a spit may become the location of a small sand dune. The wind can move sand against the dune, but sand is blown on top of it. Longshore drift is very effective at moving sand against the dune. The sand builds up on the top of the dune, but the wind cannot blow it away. Waves erode the beach, and sand is transported to the beach by backwash.

The Student Book combines the most student-friendly approach available with rigorous coverage of the specification and has been endorsed for Edexcel.
Support for GCSE Geography Edexcel B is provided online through a Kerboodle Resources and Assessment package. Resources include:

- Schemes of Work for every topic to support teaching of the new specification
- Activities and support to help students learn and remember the key geographical terminology required by the specification
- Animations and support to help students develop the key geographical skills required by the specification

Your Teacher Handbook is included with your Kerboodle Resources and Assessment subscription, so your whole department can access it easily, anywhere, at any time.

The Kerboodle Student Book is an online version of the Student Book. Teacher access is included with your Kerboodle Resources and Assessment subscription.

You can also choose to purchase student access to the Kerboodle Student Book.

To find out more, please turn to page 10.
Kerboodle's comprehensive support for exam preparation covers the range of question types your students will face in their exams through three types of activity.

It includes:
- Interactive and downloadable paper-based assessments
- Auto-marked and teacher-marked assessments, plus opportunities for self- or peer-marking
- The Kerboodle Markbook to record and present student results
- Student-friendly mark schemes
- A range of support materials and feedback

1. Test yourself
There are over 20 of these interactive, multiple-choice tests, which are ideal practice for the 1-2 mark exam questions.
- Tests are auto-marked to save you time
- Students are provided with formative feedback to enhance their understanding
- Great for homework

2. Exam-style questions
Kerboodle provides more than 150 exam-style questions, ideal preparation for open-response exam questions.
- Each question is accompanied by an interactive, front-of-class presentation, which you can use to help students 'unpick' the question
- 'Max your marks' tips help students to write strong answers
- Student-friendly mark schemes are provided – perfect for self- or peer-assessment

3. On your marks
There's an exam-style question for every topic, which provides practice for the extended writing questions.
- Each question is accompanied by extensive, flexible support materials to help you develop students' exam skills
- Includes student-friendly mark schemes, ideal for peer- or self-assessment
- Sample answers at different levels, with assessor's comments and advice, help students to see how they can improve

Sample Test Yourself screen
Sample On your marks screen

These tests make a great homework task that is easy to assign and auto-marked
Includes time-saving front-of-class presentations to help you brief your students on what's required of them
The GCSE Geography Edexcel B specification includes some content not required by previous specifications, for example an increased emphasis on the geography of the UK.

The course provides comprehensive coverage of the specification.

All students will now sit the same papers.

The student book’s accessible approach appeals to students of all abilities and differentiated resources on Kerboodle help your whole class to tackle each topic. Exam-style questions on each student book spread help students to focus their learning.

A dedicated chapter with separate sections on each of the four fieldwork topics helps students to understand each stage of the enquiry process in a fieldwork context.

Mathematical and statistical skills will account for 10% of total marks.

Skills are integrated into each topic, just as the specification requires and therefore mirroring the way skills are assessed in the examinations.

GeoActive provides you with new case studies each term, as well as access to an easily searchable archive of past case studies. The case studies are accessed via Kerboodle and are downloadable and printable.

- Case studies explore a broad range of themes and are supported by student activities
- Links to GCSE specifications, including Edexcel B, are highlighted
- New issues now include an extension version of each case study to help with differentiation and progression

If you would like to subscribe to GeoActive, please speak to your local educational consultant or email schools.orders.uk@oup.com.
