4.3 Glaciers at work

How do glaciers shape the landscape?

Watch the animation 4.3 How do glaciers shape the landscape?

Use the space below to help you create some notes about the animation.

Glaciers shape the land in 3 ways. These are:

1. .................................................................
2. .................................................................
3. .................................................................

Erosion: Glaciers pick up material from the bottom of the glacier in 2 ways. These are:

1. .................................................................
2. .................................................................

Erosion is helped by a process known as:

.................................................................

Transportation can occur in 3 areas of the glacier. These are:

1. .................................................................
2. .................................................................
3. .................................................................

Deposition: occurs when the glacier melts. How does the melting snowman help to explain this process?

.................................................................

.................................................................
